World Alive

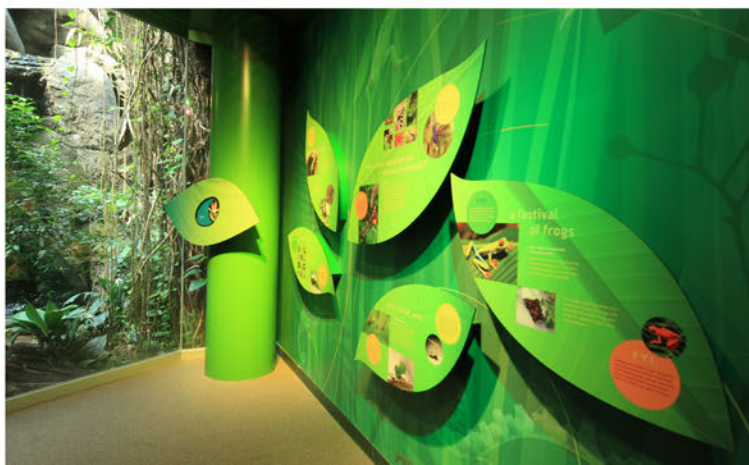

Discovery Place
Charlotte, NC

World Alive, an extraordinary celebration of Earth's biodiversity, is Discovery Place's largest exhibition and includes a new, spectacular aquarium, an exotic rainforest, a biodiversity gallery showcasing biomes from around the planet, and two new hands-on labs for inquiry-based learning. Museum-goers can immerse themselves in diverse habitats filled with live species, lifelike wildlife photography and close-up access to thousands of artifacts from Discovery Place's collection.

Studio Displays served as the primary exhibit subcontractor for Design and Production, Incorporated and was responsible for the production of scenic elements, solid surface aquaria surrounds and sculpted wall panels, graphics, and furnishings. In addition to these production tasks, Studio Displays installed all exhibit components produced by Design and Production with the exception of audio-visual and lighting. Key exhibit elements produced by Studio include a recreated Researcher's Station; scenic painting of biomes and integration of fiber optics into an existing 6' diameter globe; and radiused solid surface aquaria surrounds for eleven tanks.
